ABSTRACT

--The present invention is in the technical field of imaging. It relates to an application used in the photographic field. The invention relates more especially to a process applied in the field of hybrid photography, i.e. based on analog and digital image data. The invention process enables the display of the images on ~~the~~ a screen (2) of a terminal (1), from ~~the~~ an identifier (14) of an analog photographic support (10) representing ~~said~~ the images. The invention process operates the instructions of a program enabling a user of the terminal (1) to display virtually in real time one or more digital images (22) corresponding to the thumbnails (11) of the photographic support (10).

15

~~The present invention is mainly used by photographers who possess portable terminals that can display digital images.--~~
